Single agent xN vs MAPPO vs IPPO: robots in the obstacle map, collisions end the episode

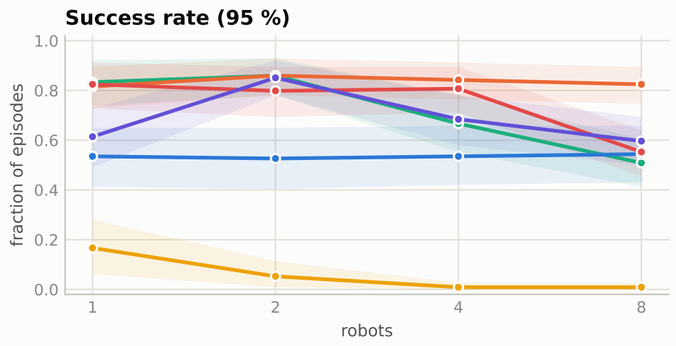

Same episodes for every policy (maps, start poses, seed), deterministic actions. Lines: mean over maps, band: 95 % bootstrap CI over maps.
Without flip_when_stuck. Team efficiency relative to Single-agent xN with 1 robot on the same map. Time to the goal: only successful episodes. Every method: lidar detections of robots in the obstacle map, the first collision ends the episode.

Single-agent xN · Single-robot independent xN · IPPO · MAPPO · IPPO retrained · MAPPO retrained

paper

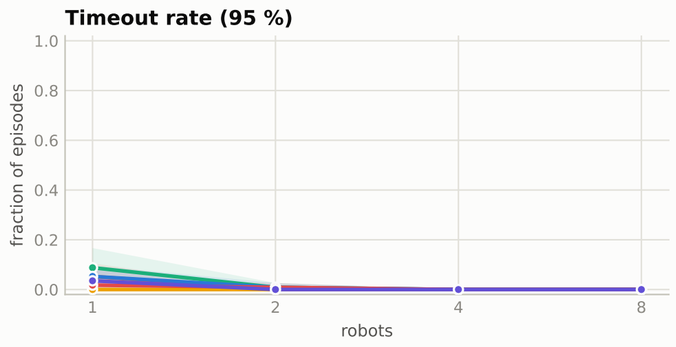

38 maps x 3 episodes, goal 95 % coverage, limit 333 min

Success rate (95 %)

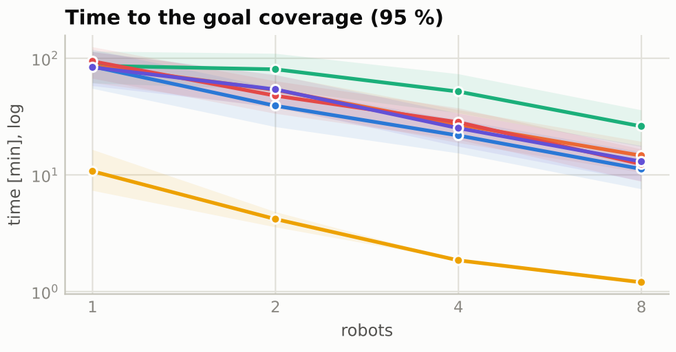

Collision rate

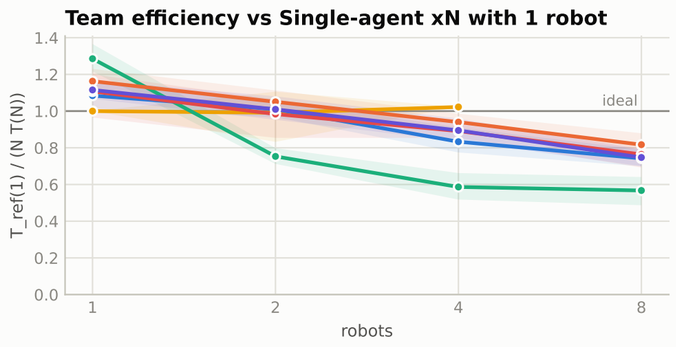

Timeout rate (95 %)

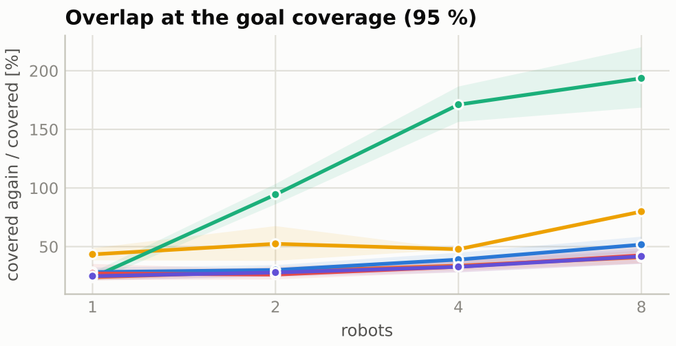

Time to the goal coverage (95 %)

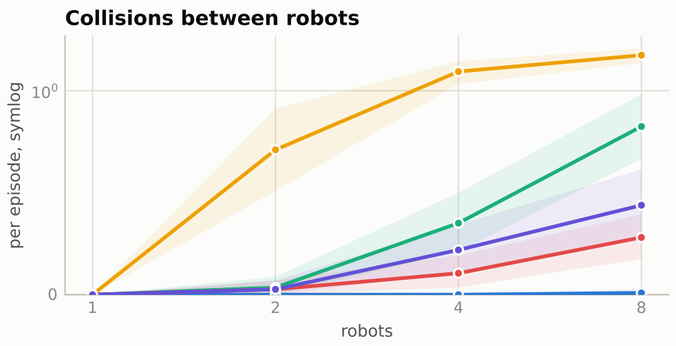

Team efficiency vs Single-agent xN with 1 robot

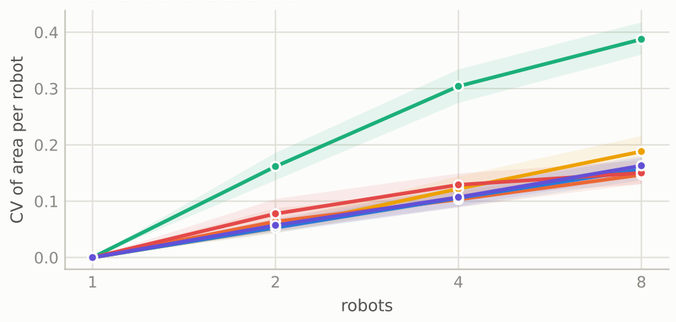

Overlap at the goal coverage (95 %)

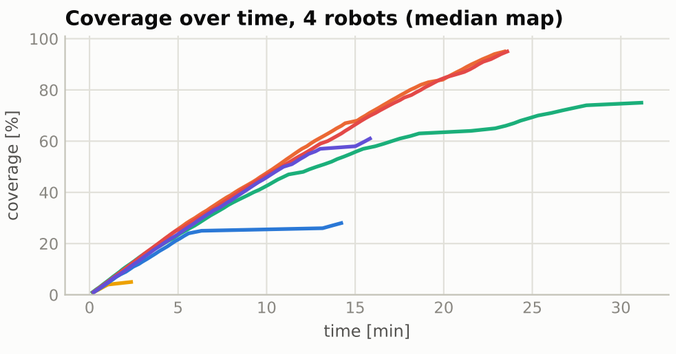

Collisions between robots

Workload imbalance

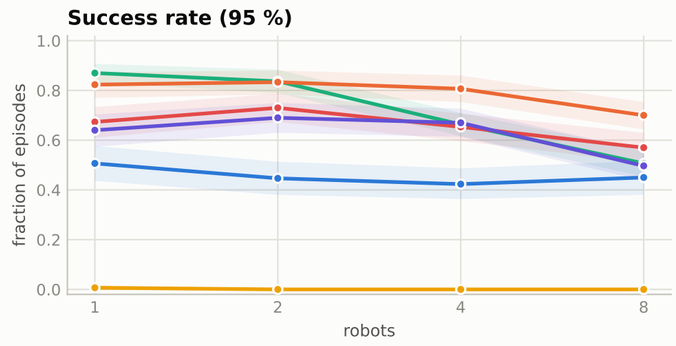

Coverage over time, 4 robots (median map)

test_large

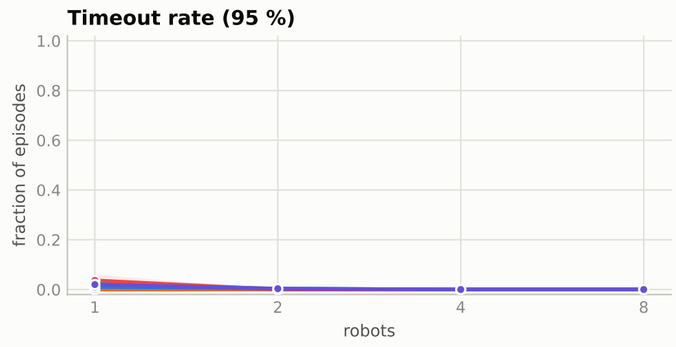

100 maps x 3 episodes, goal 95 % coverage, limit 250 min

Success rate (95 %)

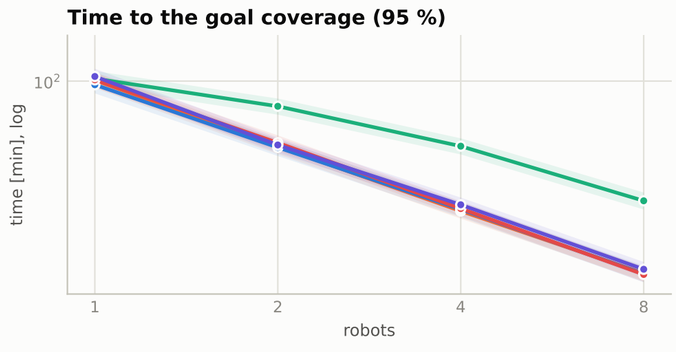

Collision rate

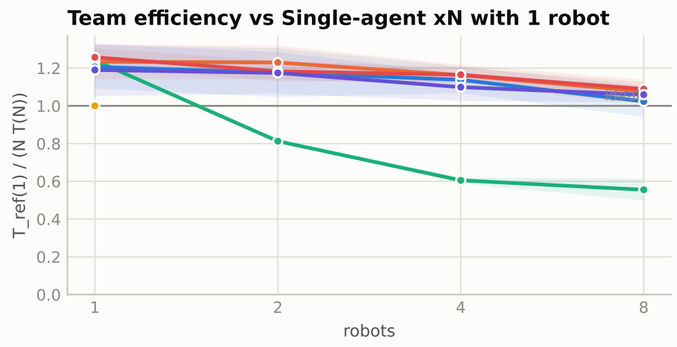

Timeout rate (95 %)

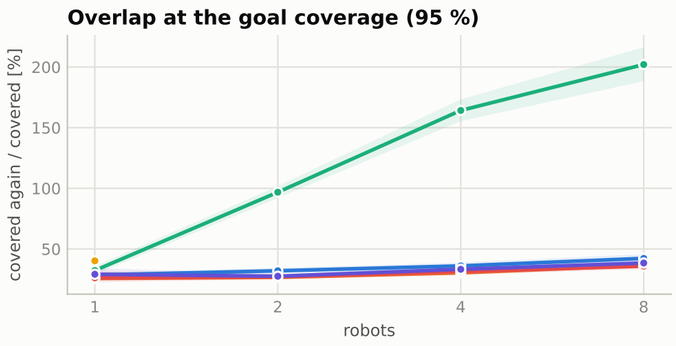

Time to the goal coverage (95 %)

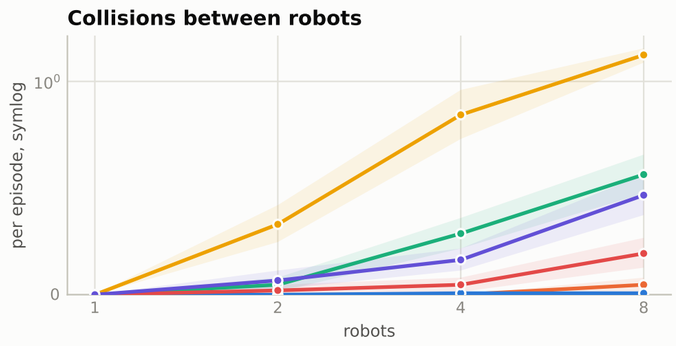

Team efficiency vs Single-agent xN with 1 robot

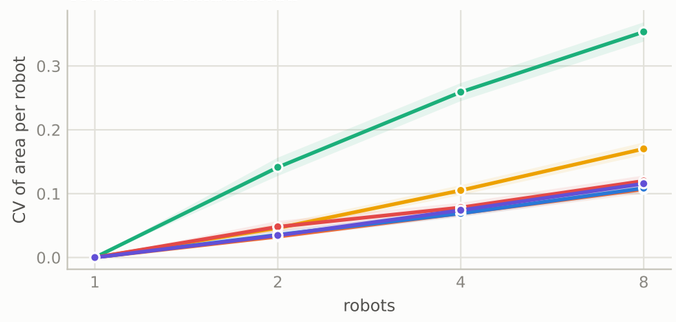

Overlap at the goal coverage (95 %)

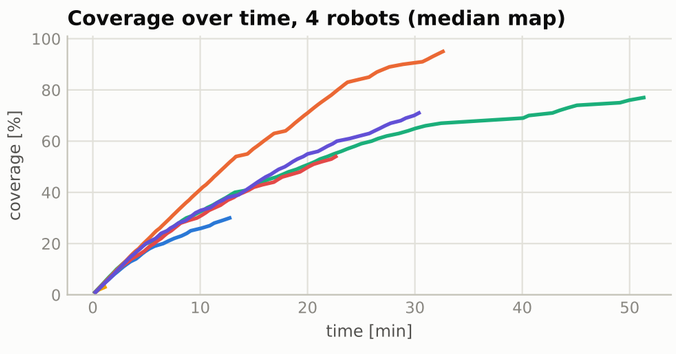

Collisions between robots

Workload imbalance

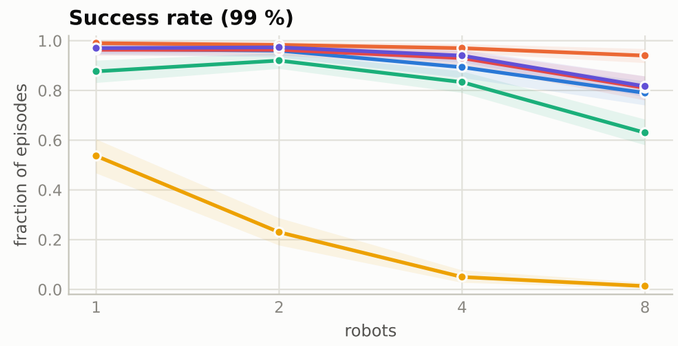

Coverage over time, 4 robots (median map)

test_small

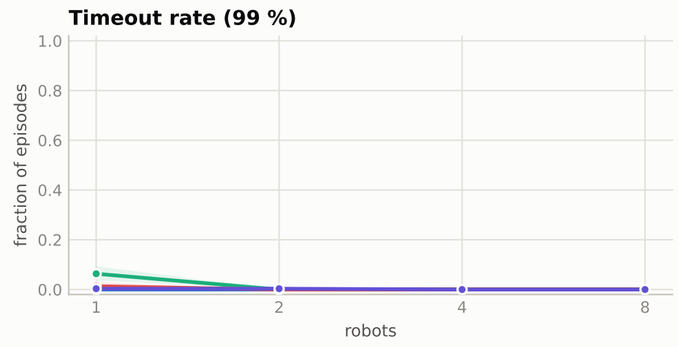

100 maps x 3 episodes, goal 99 % coverage, limit 67 min

Success rate (99 %)

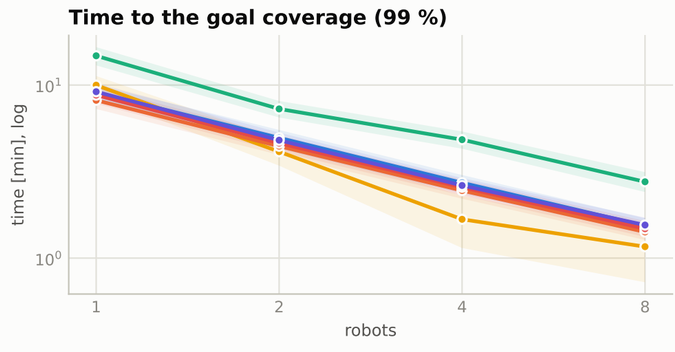

Collision rate

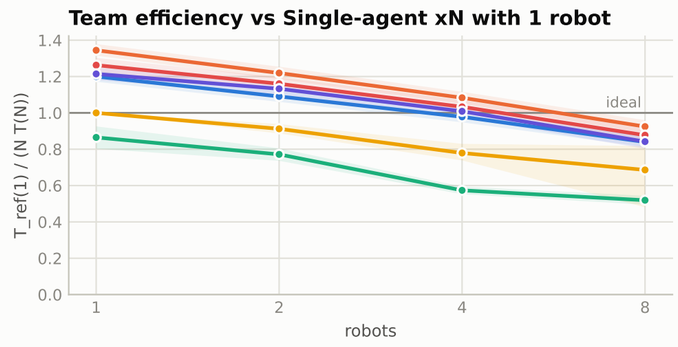

Timeout rate (99 %)

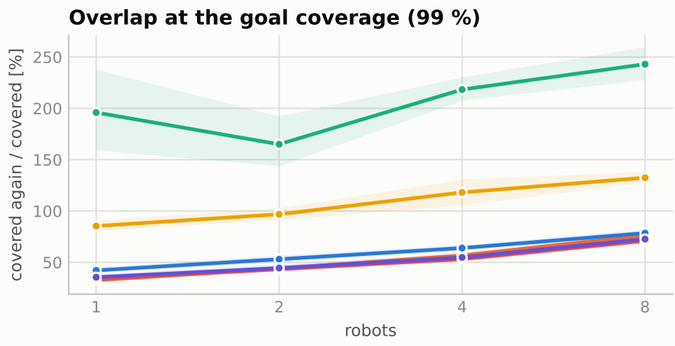

Time to the goal coverage (99 %)

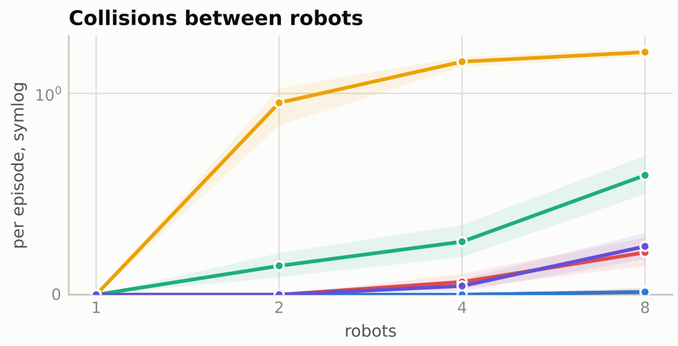

Team efficiency vs Single-agent xN with 1 robot

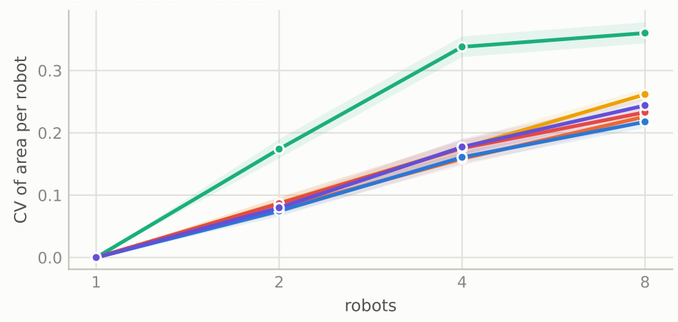

Overlap at the goal coverage (99 %)

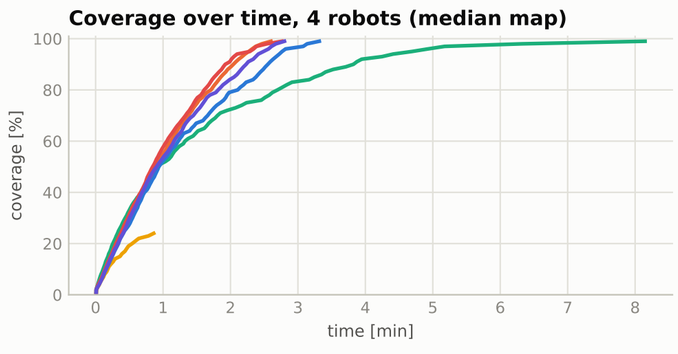

Collisions between robots

Workload imbalance

Coverage over time, 4 robots (median map)

Mean over all map sets and team sizes (N = 1, 2, 4, 8), each (map set, N) weighs the same; best of each column highlighted

	Success rate	Collision rate	Timeout rate	Time to goal min	Team efficiency T_ref(1) / (N T(N))	Overlap %	Robot collisions per episode	Imbalance CV of area	Path length m per robot
Single-agent xN	0.089	0.910	**0.000**	**15.0**	0.924	77.4	0.9	0.101	**85**
